

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-21 (canceled).

Claim 22 (currently amended): A display processing apparatus for performing a process for displaying content information that is classified into genres, the display processing apparatus comprising:

at least one display device;

at least one input device;

at least one processor; and

at least one memory device which stores a plurality of instructions, which when executed by the at least one processor, cause the at least one processor to operate with the at least one display device and the at least one input device to:

content display data generating means for

- (a) configure performing a process for configuring content cards recording content information in association with content items;
- (b) display displaying a card group including all of said content cards, a plurality of said content cards recording configured in association with content items as a card group that indicates only the presence of content with the content information being hidden; and
- (c) display displaying a content card selected by a user-operable selection indicator in a portion adjacent to the card group with the content information being displayed; and
- (d) display display data generating means for performing a process for displaying genres corresponding to displayed content information; and displaying
- (e) display the genre of the selected content information, as being displayed, wherein the content information is continuously displayed

- according to a user selection operation; ~~and, and the content display data generating means is configured to perform a process for~~
- (f) ~~move moving~~ the content cards along a content card movement parametric curve, said content card movement curve being defined by a first plurality of control points and a second plurality of control points, wherein a shape of the parametric curve changing in response to a movement of the selection indicator;
- (i) said first plurality of control points are fixed; and
- (ii) said second plurality of control points are moved.

Claim 23 (currently amended): The display processing apparatus of according to Claim 22, wherein when executed by the at least one processor, the plurality of instructions cause the at least one processor to determine the content display data generating means is configured to perform a process for determining the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group.

Claim 24 (currently amended): The display processing apparatus of according to Claim 23, wherein when executed by the at least one processor, the plurality of instructions cause the at least one processor to set: the content display data generating means is configured to determine the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group, and is configured to perform a display process in which

- (a) a content card at a position close to the selection indicator is set to an angle at which the content information is displayed; and
- (b) a content card at a position far from the selection indicator is set to an angle at which the content information is hidden.

Claim 25 (currently amended): The display processing apparatus ~~of according to Claim 22, wherein when executed by the at least one processor, the plurality of instructions cause the at least one processor to display the content display data generating means is configured to perform a process for displaying a content item selected by the selection indicator at a position on the parametric curve apart from the card group with the content information being displayed.~~

Claim 26 (currently amended): A display processing method for performing a process for displaying content information that is classified into genres, the display processing method comprising:

configuring content cards recording content information in association with content items; and

displaying a card group including all ~~of said content cards, a plurality of said content cards recording -configured in association with content items as a card group that indicates only the presence of content with the~~ content information being hidden;

displaying a content card selected by a user-operable selection indicator in a portion adjacent to the card group with the content information being displayed; and

displaying genres corresponding to displayed content information; and

displaying the genre of the selected content information as being displayed, wherein the content information is continuously displayed according to a user selection operation; and by

moving the content cards along a content card movement parametric curve, wherein said content card movement curve is defined by a first plurality of control points and a second plurality of control points, wherein -and changing a shape of the parametric curve in response to a movement of the selection indicator;

(a) said first plurality of control points are fixed; and

(b) said second plurality of control points are moved.

Claim 27 (currently amended): The display processing method ~~of according to Claim 26, which includes further comprising performing a process for determining the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group.~~

Claim 28 (currently amended): The display processing method ~~of according to Claim 2726, which includes setting: wherein the display processing method comprises determining a manner in which each of the content cards is displayed depending on a relative position of the selection indicator in the card group, and performs a display process in which~~

- (a) a content card at a position close to the selection indicator is set to an angle at which the content information is displayed; and
- (b) a content card at a position far from the selection indicator is set to an angle at which the content information is hidden.

Claim 29 (currently amended): The display processing method ~~of according to Claim 26, which includes wherein the display processing method performs a process for displaying a content item selected by the selection indicator at a position on the parametric curve apart from the card group with the content information being displayed.~~

Claim 30 (currently amended): A computer readable medium encoded with a computer program for performing a process for displaying content information that is classified into genres, the computer program comprising:

a step of configuring content cards recording content information in association with content items; ~~and~~

a step of displaying a card group including all of said content cards, a plurality of said content cards recording ~~—configured in association with content items as a card group that indicates only the presence of content with the content information being hidden;~~

a step of displaying a content card selected by a user-operable selection indicator in a portion adjacent to the card group with the content information being displayed; ~~and~~

a step of displaying genres corresponding to displayed content information and displaying the genre of the selected content information as being displayed, wherein the content information is continuously displayed according to a user selection operation; ~~and by~~

a step of moving the content cards along a content card movement parametric curve, wherein said content card movement curve is defined by a first plurality of control points and a second plurality of control points, wherein ~~and changing a shape of the parametric curve in response to a movement of the selection indicator;~~

(a) said first plurality of control points are fixed; and

(b) said second plurality of control points are moved.

Claim 31 (currently amended): The display processing apparatus of according to ~~Claim~~ 22, wherein the genre is based on an electronic program guide.

Claim 32 (currently amended): The display processing apparatus of according to ~~Claim~~ 22, wherein the genres include news and drama.

Claim 33 (currently amended): The display processing method of according to ~~Claim~~ 26, wherein the genre is based on an electronic program guide.

Claim 34 (currently amended): The display processing method of according to ~~Claim~~ 26, wherein the genres include news and drama.

Claim 35 (currently amended): The computer readable medium of ~~according to~~ Claim 30, wherein the genre is based on an electronic program guide.

Claim 36 (currently amended): The computer readable medium of ~~according to~~ Claim 30, wherein the genres include news and drama.
